Smell That Energy

Division: Earth & Environmental Sciences

Category: Junior

Region: Lambton County

City: Wyoming, ON

School: St. Francois Xavier

Abstract: Concerned by our depleting energy reserves, I searched for an alternate fuel source. I gathered four different manures (cattle, sheep, turkey, and horse), dried them, then burned them. I measured the heat produced by each and compared the temperatures to those produced by coal and wood.

Awards	Value
Honourable Mention - Earth & Environmental Science - Junior	\$100
Sponsor: Petro-Canada	
Total	\$100
