Backpacks: A Pain in the Back

Division: Health Sciences / None

Category: Junior

Region: Bay Area

City: Dundas, ON

School: Canadian Martyrs E.S.

Abstract: The researcher investigated the relationship of the load within a backpack to the force required to support and keep it stable. Experiments were performed to see how much force was needed to bring our spine back to its neutral position once loaded with a backpack. The study confirmed that the force to support the load is dependent on the load's position within a backpack.

Biography

Carolyn Chong is 13 yrs. old and in gr. 8 at Canadian Martyrs Catholic Elementary School in Hamilton, Ontario. She resides in Dundas with her family of 7. She participates in school sports and extra-curricular activities such as ballet and piano. Carolyn likes to swim and is currently working on to becoming a lifeguard.
