Acid Rain: Is It Gone Or Just Forgotten?

Division: Génie et sciences de l'informatique / Aucun

Catégorie: Intermédiaire

Région: East Parry Sound

Ville: Restoule, ON

École: Almaguin Highlands H.S.

Sommaire: The project "Acid Rain: Is It Gone, Or Just Forgotten?" studies the acidic precipitation in the Almaguin Highlands Region, an area southeast of Sudbury. This project demonstrates past and the future potential environmental impact on the forests and lakes of this area. The major sulfur dioxide and nitric oxide producers in Canada and other countries that are contributing to acid precipitation are examined.

Biographie

My name is Stephanie Stripe and I am a grade nine student at Almaguin Highlands Secondary School located near North Bay, Ontario. After several attempts I am finally going to CWSF! At school my favourite subjects are math and science. I also enjoy many team sports and play on the school's soccer and volleyball teams. I enjoy swimming in summer and skating in the winter. I like to read books, watch movies, and play with my dog. I have a great interest in the environmental issues of today, and my project this year deals with the local effects of acid rain in my community.
