Abstract: It is a commonly held opinion that capacitors discharge too rapidly to ever become a useful energy source. I have designed a device that allows for steady discharge of a capacitor so it can power various electronic devices for several hours. Such a battery can be recharged in minutes.

Awards	Value
CAP Physics Prize - Intermediate Sponsor: Canadian Association of Physicists	\$250
Honourable Mention - Engineering - Intermediate Sponsor: Youth Science Foundation Canada	\$100
Total	\$350
