Baruch Watters

1950 Dooms Day Asteroid

Division: Engineering & Computing Sciences / None

Category: Intermediate

Region: Beaufort-Delta

City: Inuvik, NT

School: Samuel Hearne Secondary School

Abstract: This project set out to determine whether or not it would be possible to deflect an asteroid. The distances the test asteroid moved when the explosives were set off proved that it would be possible. The force of the explosives pushed the test asteroid distances of around 2.5 cm.

Biography

My name is Baruch Watters. I love sports; my favorite sports are hockey and soccer. I participate in many school activities, such as indoor lunch time floor hockey, lunch time basketball, and soccer. I love to go outside and play road hockey with my friends, I play at least once a week. When I finish university I hope to become a chef or carpenter. I have come in first, second, and third place for science fair, one of the three with me not even being there. This is my second time going to the national science fair and I am very excited.
