School: Olds Junior Senior High School

Abstract: This project follows the development cycle of a product that allows anyone from the most advanced to the most basic computer user to easily, reliably and quickly store and share files online, focusing on the usability of the product.

Biography

Hello, my name is Collin Fair. I consider myself to be very helpful, curious, and inventive. I am fluent in a wide variety of computer programming languages (eg PHP, VB 6, Actionscript), and I am enrolled in the French course at my school. I regularly integrate hardware (ie micro controllers) with software programs. I volunteer in many school activities, such as helping staff and students with their computer related problems, helping at fundraising events, and participating in my school's mentoring program. My interests are computer programming (as hinted above), tinkering with electronic devices, biking, and swimming. My favorite magazines are Make:, Popular Science, PC World, and Consumer Reports. I have an interest in renewable energy as a way to reduce global warming. I am planning to go into a post-secondary education program that deals with computing science, networking, and engineering, and am scheming to start my own computer-related business. My main achievements are science fair related, having been in science fair grades 1-7 along with going to the regional level for the past 3 years. I also am a participant in my school's honour and jazz band programs.

Awards
