Health Behaviour Among Adolescents in Hamilton, Ontario

Division: Life Sciences / None

Category: Intermediate

Region: Bay Area

City: Dundas, ON

School: Westdale S.S.

Abstract: This study examined health habits among male and female adolescents. A health survey was created and completed by 345 high school students in Hamilton, Ontario. The results showed a significant difference between males and females on several variables, including perception of eating habits, and exercise. Several variables showed significant correlations. Gender differences should be considered when trying to improve health among adolescents.
