Phytoremediation (A Second Modern Method to Hydrocarbon Clean Up)

Division: Earth & Environmental Sciences

Category: Intermediate

Region: Northern Saskatchewan

City: La Ronge, SK

School: Churchill Community High School

Abstract: Diesel fuel can be detrimental when it is spilled in the environment. That is why it is important to research ways such contamination can be cleaned up efficiently. I used alfalfa, creeping red fescue, and red clover in the method of phytoremediation to remove hydrocarbons from diesel fuel contaminated soil.
