Caitlin Ohama-Darcus

A Pollution Solution: The Municipal Waste Recycling Plan

Division: Sciences de la terre et de l'environnement

Catégorie: Intermédiaire

Région: Greater Vancouver

Ville: Vancouver, BC

École: York House School

Sommaire: Canadians generate approximately 2.2 kilograms of solid waste every single day, the majority of which is organic material. Based on the results of three composting experiments, I have developed a convenient, cost-efficient and nature-friendly garbage disposal system for the city of Greater Vancouver. The Municipal Waste Recycling Plan is a solution for our pollution.
