Biodiesel: The Boater's Choice? The Effects of Biodiesel and Diesel in a Lettuce Seed Bioassay

**Division:** Earth & Environmental Sciences

Category: Junior

Region: Greater Vancouver
City: Vancouver, BC
School: Crofton House School

**Abstract:** Biodiesel is a cleaner-burning renewable alternative to petroleum-based

diesel fuel. Lettuce seeds were incubated with various concentrations of biodiesel and diesel to compare their effects on lettuce seed germination and root elongation. Results showed that biodiesel was as toxic and

perhaps slightly more toxic to lettuce seeds than diesel.

Awards	Value
The University of Western Ontario Scholarship	\$1 500
Silver Medallist - \$1500 Entrance Scholarship	
Sponsor: University of Western Ontario	
Silver Medal - Earth & Environmental Sciences - Junior	\$700
Sponsor: Petro-Canada	
Total	\$2 200
