Abstract: Le fer est un élément nutritif essentiel au bon fonctionnement du corps. Notre alimentation n'est pas toujours équilibrée; alors plusieurs céréales sont enrichies de fer. Est-ce qu'on peut retirer le fer des céréales ? Quelles céréales contiennent le plus de fer ? Grâce à la propriété magnétique du fer, je crois que je pourrai extraire le fer des céréales.

Biography

I am a 12 year old girl in grade seven, the fourth born of five children in my family. I love to play sports; hockey, soccer and volleyball are my favourites. I play the position of defence in hockey, hustling and blocking is my style. I am an avid reader and a devoted piano player. In the summer, I enjoy everything to do with the river : tarzan rope swinging, waterskiing, and lounging in the sun. In a public speaking contest, I have won first place at the school level and second place at the city level. My goals for the future involve university studies and raising a house filled with children. My faith, my friends, my studies, and my family are my valuable treasures!
