Abstract: I asked my dad if there was a way to develop a system to try to warn the operator of a spill and catch any oil before it gets on the ground. We purchased a blue poly tub, borrowed a sensor and bought a tarp. I put these items together with the help of my dad and came up with the enviro safe.

Biography

My name is Tayler Sean Kunz. I was born June 6, 1993. I am an average grade student. I participate in school sports like football. I play center. I play for the community u-16 soccer league. My hobbies include building model cars, watching TV and playing video games. I collect model cars of all years and sizes. My interests are in cars and I plan to restore my 1977 mustang II. My post secondary plans are to enter into a trades school and learn about mechanics regular and heavy duty. I have had numerous achievements and awards for various things. In grade 1 I received the christian action award. In grade three and five I took first place at the music festival for choral speech. This year I was recognized as the only grade nine to play on the senior football team. And my most notable experience was creating, building, and winning with my project.
