

## ESPC 2005 - Vancouver (Colombie-Britannique)

### Randa Stringer

#### Nouveau Garbage

**Division:** Sciences de la terre et de l'environnement

**Catégorie:** Junior

**Région:** Victoria County

**Ville:** Cameron, ON

**École:** Central Senior

**Sommaire:** I investigated the relationship between the natural environment and garbage. Through density change, qualitative observations and bacterial analysis I found that, although our modern materials are meant to be durable, they actually decompose in a landfill to create harmful leachates that seriously damage our environment.
