Go Water Down Under

Division: Category:	Earth & Environmental Sciences Junior
Region:	Northern Saskatchewan
City:	La Ronge, SK
School:	Churchill Community High School
Abstract:	People change oil in their cars all the time and virtually everyone spills some on the ground in the process. They think, `Hey! It won't hurt`. My project investigated how to filter oil from water by working with four different surfaces that people may have for laneways, and also different filtering materials.
