Chris Schoepp

You Can't Hear That?!

Division: Life Sciences / None

Category: Junior

Region: Fraser Valley

City: Surrey, BC

School: Langley Christian

Abstract: My science fair project, "You Can't Hear That?!", is a study on the ability people have to hear high frequency sounds. The purpose of my study is to find out if age affects your ability to hear high frequency sounds. My variables are age and frequencies of sound. My control is the volume. My sample size is 112 people from ages 5 to 74.

Biography

My name is Chris. My trip to the Canada-Wide Science Fair will be my first time on a plane. I attend Langley Christian Middle/High School where I played setter on the grade 8 volleyball team. Our team was undefeated this season. Now I am on the track and field team and hope to compete in the 800 metre and long jump. I enjoy umpiring softball and make some extra money doing it. I also have two paper routes. I enjoy playing football. My favourite movies are Indiana Jones and Ironman. I enjoy playing Madden 09, Need for Speed Undercover, and Free Rider 2 on the Internet. My favourite bands are Red and Skillet. I like to go to youth group. My favourite events at youth are lock-ins where we stay overnight at church. I hope to get a job as a computer graphics designer. My other career choices would be a position in the Canadian Forces or an Olympic athlete. I went to California a few years ago and visited Disneyland, Knott's Berry Farm, Legoland, Seaworld, and the San Diego Zoo. It was awesome. I hope Winnipeg will be just as good, if not better.
