City: ,

School:

Abstract: This project uses the science of photosynthesis to make a filter that will remove carbon dioxide from fossil fuel emissions. This second phase of the project was developed based on results of previous investigations. A unique experimental design is used to investigate the effects of algae on the concentration of atmospheric carbon dioxide.

Awards	Value
Honourable Mention - Environmental Innovation - Junior Sponsor: EnviroExpo, Presented by VIA Rail Canada	\$100
Total	\$100
