Region: Toronto

City: Toronto, ON

School: Giles School, The

Abstract: My project is about accessories and song genres on IPod causing different decibel levels. I tested different headphones at the same volume on an IPod. I did multiple tests with each headphone, switching song genres each time, to see if they also have different effects on the intensity of the sound. I have also tested different volume levels during my experiment to determine their effects.

Biography

I go to a french immersion school. My favorite sports are basketball and ping pong. I learn three different languages: English, French, and Mandarin. I am a beginner violinist. I like to read a lot of books, my favorite types being Mystery and Adventure. I have not chosen what career I want to be when I grow up, but I am interested in becoming a doctor, preferably a cardiac or cranium surgeon. I am a picky eater, and reluctant to try new recipes/meals. My favorite subject in school right now is Math, though it is very challenging. I like music a lot, and listen to most song genres.
