I Spy With My Little Eye

Division: Physical & Mathematical Sciences / None

Category: Junior

Region: Northwest Saskatchewan

City: Meadow Lake, SK

School: Jonas Samson Jr. H.S.

Abstract: I Spy With My Little Eye is all about eye color and visibility. The investigative question I had was, "Does the eye color affect the ability to see in lightness or darkness?". I found that green eyes see the best in the dark and that blue eyes see the best in the light.

Biography

I was born in Ft. McMurray, Alberta, where I lived for seven and a half years. My family then moved to Southern Alberta, in a smaller town called Stettler. We only lived there for five months, when our family moved to Meadow Lake, Saskatchewan. My dad owns and manages the Ford dealership here, and also owns the Ford dealership in Stettler, AB. My mom is a stay-at-home mom, who occasionally goes into work at Ford. As for me, I enjoy all sports, especially snowboarding, basketball, and baseball. I am currently in the Basketball Saskatchewan Inc. program, where scouts come to watch our tournaments, and keep a record of you throughout your school life. I also enjoy travelling, and have done a bit. Next year, on the spring break, I've been asked to go on a 15 day trip to New Zealand and Australia with one of my teachers. It's part of the Education First program. Last year, I was awarded top overall grade seven student. In grade six, my partner and I were asked to go to Canada-Wide Heritage Fair. As of now, my university plans are to attend University of Waterloo for optometry, and play university basketball.
