City: ,

School:

Abstract: My project is based on the effects of gender identity on short-term memory. The problem was to see if gender identity made a difference in the way that kids between the ages of 9-14 remembered specific items that I had showed them. I tested 100 kids and individually showed them 20 pictures, traditionally gender related and recorded their responses and statistically analyzed the results.

Awards	Value
The University of Western Ontario Scholarship Bronze Medallist - \$1000 Entrance Scholarship Sponsor: University of Western Ontario	\$1 000
Bronze Medal - Life Sciences - Junior Sponsor: Pfizer Canada	\$300
Total	\$1 300
