Take a Spin

Division: Génie et sciences de l'informatique

Catégorie: Junior

Région: Peace Country

Ville: Spirit River, AB

École: Spirit River Regional Academy

Sommaire: My goal was to build a machine that could remove the most oil possible from a commercial soaker pad, so that it can be re-used and have a high adsorption capacity. I found that by keeping the tub at a constant 29 degrees Celsius, the oil was less viscous, making for easier removal.
