#### Push Power Generator Exploring The Co-Relations Involved In Electromagnetism

**Division:** Health Sciences / Environmental Innovation

**Category:** Junior

**Region:** Rideau-St. Lawrence

**City:** Clayton, ON

**School:** Notre Dame C.H.S.

**Abstract:** My project is a generator, shaped like a piston, which I tested to discovery and prove different laws of electricity. While doing experiments, I established some knowledge by securing and altering certain variables which left me with multiple outcomes and a spectrum of results. Overall, my project was an exciting method of learning about the co-relations involved in electro-magnetism

#### Biography

I am a beatboxer (or mouth drummer), otherwise known as Petey Wunda. My favourite sport is track & field. I enjoy all genres of music; from Frank Sinatra to Eminem (and everything inbetween). My favourite subjects are science and art. I have written two poems which were published in England; one of them was read by the Bishop of Gambia. My favourite shows are Little House On The Prairie, How It's Made, and Whose Line Is It Anyways. I have no chosen career, however, the careers which I consider pursuing would be a scientist, performer or an author. I have been a professional actor since I was 6 and have met Good Charlotte and Billy Talent while I was acting in their music videos. I am one of very few North Americans who can honestly say they have never had a Coke, Pepsi or any energy drink. My favourite foods are meat lovers pizzas (although I do not have them too often) and anything that starts with the phrase "Chocolate Covered..." My biggest weakness is and probably always will be that, although my mind sometimes stops thinking up ideas, my mouth keeps talking.
