Do String Players Have Longer Left Fingers?

Division: International

Category: Junior

Region: Fraser Valley

City: Langley, BC

School: Langley Christian

Abstract: My project is answering the question: Do String Players Have Longer Left fingers than people who don't play strings? My hypothesis was that string players have longer left fingers because stress causes osteoblasts to produce more bone. My procedure was to measure each finger of a number of people, calculate the average finger length and analyze the data statistically.

Biography

Christian Suh is a student currently attending Langley Christian School. He skipped Grade Four and is currently in Grade Eight. He enjoys skiing, bicycle riding, videogames, and reading. He helps out at the Food Bank in the summer. He plans to attend university for post-secondary education and plans to become a family doctor as an adult. He enjoys playing the violin and has won numerous awards in violin competitions and festivals. He is very excited to be in the Canada Wide Science Fair.
