Abstract: Cigarettes contain 4,000 different chemicals with more than 300 known poisons that affect humans, such as nicotine, carbon monoxide, tar, ammonia, formaldehyde, arsenic, and dioxins. There have been innumerable studies on how smoking affects humans. With this experiment we explored the effect cigarette smoke has on plant life.

Awards	Value
The University of Western Ontario Scholarship Bronze Medallist - \$1000 Entrance Scholarship Sponsor: University of Western Ontario	\$1 000
Bronze Medal - Life Sciences - Intermediate Sponsor: Pfizer Canada	\$300
Total	\$1 300
