Abstract: For our project, we decided to study the factors of human lung capacity. To do this, we tested the lung capacity of a diverse population using a hand held spirometer. Each participant was to blow into the spirometer at least three times for the best results. To compare the factors, we asked for their age, weight, height, use/non use of cigarettes and their physical fitness.

Biography

I am a oriental student living in northern saskatchewan. I'm am active in extracurricular activites such as piano, hockey, track, air cadets, and cross country running. I also help my parents at their restaurant during my off time. I plan to continue my education at the university of saskatchewan but i am currently unsure of what I want to become when I'm older but like others i have a vague idea so far. My choices currently are a chemist or a kinesiology.
