Sissonne: The relation between knee angle and impact force

Challenge: Health

Category: Junior

Region:

City: ,

School:

Abstract: In this project, I explore the possible relation between the impact force and bend angle of the knee during the landing of a sissonne. Young, non-professional, female dancers were asked to jump on a force plate with varying angles of the knee as they land. Force data was recorded and knee angles were analyzed from videos taken of the jumps.
