Madison Hayley

Learning What's Best?

Challenge: Discovery

Category: Junior

Region: Chinook Country

City: Priddis, AB

School: Red Deer Lake School

Abstract: My project investigates the learning technique that the kids from the ages of twelve to fourteen learn the best from. This experiment I noticed that kids like watching videos a lot more than they like to read, but in my results there was slightly more answers correct from reading then from watching a video. But really it comes down to how the individual learns best.

Biography

My name is Madison Hayley and i'm grade seven this year. Its my first year doing science fair. I love any type of sport, and this year i have participated in many! I was on the junior volleyball team, i was also on the junior basketball team, and i am currently on the badminton team. After badminton is over we move into track. Witch i'm VERY excited for because it will be my first year doing it, and my brother has been doing it for a couple years now. So i'm very excited! I also participate in activities out of school to. I figure skate, i have been for a few years now and i am working on my doubles. I am also on a U13 club volleyball team. My team is currently 1st in the province. For my career i haven't really thought of it much because i'm only in grade seven, so i'm still growing up and figuring out who i am. I do have a dream to be on an olympic volleyball team though. My biggest achievement by far is making it to Canada Wide Science Fair. This is definitely a huge opportunity for me.
