

CWSF 2011 - Toronto, Ontario

Jacquelyn Draper

Clash of the Chemicals

Challenge: Information

Category: Intermediate

Region: Central Okanagan

City: Kelowna, BC

School: KLO Middle School

Abstract: This project is an experiment to see the best neutralizer for bleach. I used household acids. I tested 1 tsp of an acid, 1 tsp of bleach to get the pH. Then I combined them together and tested the mixed pH. I did this test 30 times for each acid. I found that lemon juice is the best neutralizer for bleach.

Biography

My name is Jacquelyn Elizabeth Draper and I am in Grade 9 at Ecole KLO Middle School in the English Program. I am a good student and I enjoy school. I like to paint, draw and be creative. I also play the piano. Next year I will be attending Kelowna Secondary School and I hope to graduate with many fond memories. I am not sure which university I would like to go to but I am sure what I would like to do. First I would like to get a Masters in Political Science and a PhD in Economics. I would then like to teach economics at a university. Later down the road I would like to run for Prime Minister and be involved in making Canada a better place. I have always loved people and working with them. I hope to meet many unique people in my life time. One man that I thought to be particularly interesting was the MP for Kelowna Ron Cannan. He is very kind and a unique politician. He seems to really care about the people he represents and works very hard to improve their community. I hope to be like him one day.
