Perfectly Problematic Plastics

Challenge: Environment

Category: Junior

Region: Lethbridge

City: Lethbridge, AB

School: St. Francis Junior High School

Abstract: I have conducted an experiment to test 3 different samples of 100% compostable plastics in 3 different environments-landfill, ocean and managed compost. I also investigated what happens to the plastic recycling within my community.

Biography

I am a grade 7 student attending junior high here in Alberta. Other than having a keen interest in Science, I am also into the Fine Arts. I was proud to be a part of my school's Spring musical production of Willy Wonka. I enjoy playing acoustic and electric guitar, downhill skiing, photography, reading, and playing paintball with my friends. I have always been a fan of video games and have had the opportunity to beta test new games under development. In the Summer I look forward to camping and going on vacations with my family. I also volunteer at my local library helping younger children practise reading. I have two cats, named Pearl and Shadow. One day I hope to own a ferrari and have a career in technology.
