Think Fast! A Study on the Effects of Gender on Hand-Eye Coordination

Division: Health Sciences

Category: Junior

Region: Prince Edward Island

City: Cornwall, PE

School: East Wiltshire Intermediate School

Abstract: This project tested which gender's hand-eye coordination was faster. The same test was used to compare the coordination of classroom boys and girls; athletic boys and girls; and video gamers. The classroom boys had significantly faster hand-eye coordination than girls. However, there was no difference between the athletic boys and girls.
