Human Observation

Challenge: Health

Category: Junior

Region: Sudbury

City: Sudbury, ON

School: MacLeod P.S.

Abstract: I wanted to find out if gender and age affect observations of children between the ages of 9 and 14 years. To assess the level of observation of my subjects I conducted three tests and compared the mean scores by gender and age. My results show that gender and age do not affect human observations.

Biography

My name is Radhika Nangia and I am 12 years old. I was born in India and moved to Canada when I was three with my father, mother and younger brother (Ritik). After spending few months in Windsor we moved to Sudbury, Ontario. I participate in youth-cultural activities including dances and plays in school and my community. I have been awarded academic and citizenship awards by my school several times. I was also awarded community service award by Multi-cultural and Folk Arts Association of Sudbury. This year I am also representing Sudbury region in the Spelling Bee Competition being held in Toronto. My hobbies are reading, writing, playing and dancing. When I grow older I would like to be a cardiologist or a neurologist. I want to take the field of science and participation in Canada Wide Science Fair is a great opportunity.
