A Rotten Idea

Division: Sciences de la terre et de l'environnement

Catégorie: Junior

Région: Bluewater

Ville: Kincardine, ON

École: St. Anthony's School

Sommaire: The effect of five variables on composting was examined: temperature, Carbon:Nitrogen ratio, particle size, stirring, and soil addition. Data from multiple samples for each condition were thoroughly analyzed. Carbon:Nitrogen ratio and temperature had the greatest impact on the rate of composting.
