Future Climate Change in Canada

Division: Sciences de la terre et de l'environnement

Catégorie: Junior

Région: Bluewater

Ville: Walkerton, ON

École: Brant Township Central

Sommaire: Increasing levels of greenhouse gases are resulting in a period of unprecedented global warming. Northern latitudes are expected to face drastic environmental changes as the polar ice cap melts. All forms of life, our water, and air quality will be affected as Canada's Arctic, forests and water systems undergo major transitions.
