Ermando Crupi

Can Wii Have Better Hand-Eye Coordination

Défi: Santé

Catégorie: Intermédiaire

Région: Northwestern Ontario

Ville: Thunder Bay, ON

École: St. Ignatius S.S.

Sommaire: This experiment investigates whether hand-eye coordination levels improve after playing Wii Sports. Test subjects were separated into 2 groups. Test subject had their hand-eye coordination levels measured through 3 tests prior to the experiment. The test group played Wii Sports for 7 days while the control group did not play any video games. After one week each participants was tested again and results were compared

Biographie

Ermando Crupi was born and raised in Thunder Bay, Ontario and is a grade 10 student at St. Ignatius High School. This will be his first year participating at the Canada Wide Science Fair and was also his first entrance at the North-western Ontario Science Fair. Ermando's hobbies and interests include drumming, hockey, badminton, guitar and gaming. Ermando will be playing the drums for the St. Ignatius musical production of "Hairspray" (the musical) at the Community Auditorium in Thunder Bay (for four performances).
