Wind Energy and Canada Part II

Division: Sciences de la terre et de l'environnement

Catégorie: Intermédiaire

Région: Toronto

Ville: Toronto, ON

École: Martingrove Collegiate Institute

Sommaire: This is a study of the viability of wind energy in Canada based on a comparison with other forms of renewable energy and the hidden drawbacks involved in their use. Research was also done into the wind energy production of other countries, as well as the technical and environmental requirements of wind turbines.
