

## CWSF 2012 - Charlottetown, Prince Edward Island

### Have we been doing it **WRONG** all along?

**Challenge:** Discovery

**Category:** Intermediate

**Region:**

**City:** ,

**School:**

**Abstract:** My project was done on a grain aeration study conducted by Ron Palmer. I wanted to see if his theory about turning off your aeration fans during the day because of the higher humidity levels was accurate. I simulated an aeration bin and a night and day environment. Then I aerated grain in my bin and tested the grain for moisture levels every half hour.
