Efficacy of Eye Drops on Keratoconjunctivitis Sicca After Swimming

Division: Sciences de la santé

Catégorie: Junior

Région: Toronto

Ville: Toronto, ON

École: University of Toronto Schools

Sommaire: Thirteen participants, who swam a minimum of three widths of a chlorinated pool, were tested for a reduction in three keratoconjunctivitis sicca (kc) symptoms after eye drop use. The results indicated that 85.6% of the participants had a reduction in kc after swimming in a chlorinated pool.
