Efficacy of Eye Drops on Keratoconjunctivitis Sicca After Swimming

Division: Health Sciences

Category: Junior

Region: Toronto

City: Toronto, ON

School: University of Toronto Schools

Abstract: Thirteen participants, who swam a minimum of three widths of a chlorinated pool, were tested for a reduction in three keratoconjunctivitis sicca (kc) symptoms after eye drop use. The results indicated that 85.6% of the participants had a reduction in kc after swimming in a chlorinated pool.
