

CWSF 2012 - Charlottetown, Prince Edward Island

Juliana Gallas

Let's make Some Noise . . . Or Not!

Challenge: Discovery

Category: Junior

Region: Waterloo-Wellington

City: New Hamburg, ON

School: Forest Glen P.S.

Abstract: As technology and society continue to change and improve there has been a marked increase in the amount of sound and noise. However, do we always want to hear the constant noise of technology? This experiment seeks to minimize noise with sound-absorption. Discover which of cork, carpet, carpet underlay, curtains, bubble wrap, or polystyrene foam (Styrofoam) has the best capabilities to provide quiet.

Biography

Juliana Gallas is a Grade Eight student who attends Forest Glen Public School in New Hamburg, Ontario. Juliana is active in school groups such as Global Issues, Art Club, the Yearbook Committee and the mathematic competition GAUSS. Juliana is also involved in her church, helping in Sunday School and attending youth events. Juliana has played piano for almost seven years and has completed Grades One and Three with the Royal Conservatory of Music. Juliana is the oldest of five children, and has three younger brothers and one younger sister. This project was inspired from an interest in both technology and music. For further investigations into the project, Juliana would continue doing research which would look at the possible effect of the thickness and density of different carpets and the effect this would have on sound absorption. When choosing a topic for a science project, Juliana recommends selecting a topic which you personally find very interesting, so that your interest shines through the project and makes others interested to find out more from your results.
