School: École Secondaire du Sommet

Abstract: This innovation is a way to further advance car security. I wish that my invention will slowly grow till every car has this amazing safety feature. My goal is to stop criminals and create a safer environment for our future.

Biography

The inspiration to to my project was created when someone had broken in my dads car and stolen my dads stereo while he was on a business trip. I had this idea to put a camera in a dash board of a car, it was at first just a plan. Then my dad told me it was a good idea. I wanted there to be a way I could see who was in the car without actually being there. My innovation is something that could be sold in the market. It would be better if there was a car model created for this design so it would fit the best. with this product I am hoping to change the way security is known.
