Abstract: I wanted to discover which type of paper airplane had more lift, and whether the planes who had more wing surface also had more lift. In order to do this I constructed a wind tunnel.

Biography

In school my favourite subject is math, but I do well in all subjects. I am in French Immersion in school. I like to play video games and making video games. I play volleyball on my school team, and belong to a Youth Curling Club for my area. I want to design video games when I get older. I got the inspiration for my project from playing with paper airplanes. Then I got the idea to test aerodynamics, so I came up with the wind tunnel idea. I don't have any plans for future investigations right now. My advice for other students would be to think of something smart and then have fun doing it!
