

CWSF 2013 - Lethbridge, Alberta

Connor Paton, Colton Allen

ATV Forklift

Challenge: Innovation

Category: Intermediate

Region: Southeast Saskatchewan

City: Carnduff, SK

School: Carnduff High

Abstract: Our idea was to develop a way to move heavy objects easier than by hand while doing chores on the farm and since we do not have a forklift attachment for our skid-steer, we thought of making an attachment for our ATV. It has been found to be a very handy and convenient device to put on the front of the ATV.

Biographies

Connor - We made the fork lift of a ATV because carrying stuff was getting old. So we made this so we can haul stuff around the farm. We carry stuff like calves, pales, feeders, everything. I live on a farm outside of Carnduff Saskatchewan.

Colton - My name is colton allen me and my partner connor came up with this idea while doing chores together. we had to lift 50 pound square bails by hand and needed a easier way. So we invented the forklift.
