

CWSF 2013 - Lethbridge, Alberta

A System for the Passive Modification of the Wavelength of Light in a Greenhouse

Challenge: Innovation Category: Intermediate

Region: City: School:

Abstract: Plants grow at a variety of rates when exposed to different wavelengths and

durations of light. This innovation is a passive system, designed in a way that it can be programmed to control the specific wavelengths of light and duration of light exposure on the plant. This system attempts to tailor the growth cycle of a greenhouse crop in a controlled and energy efficient way.

Awards	Value
Excellence Award - Intermediate - Bronze Medal	\$100
Sponsor: Youth Science Canada	
Western University Scholarship	\$1 000
Bronze Medallist - \$1000 Entrance Scholarship	
Sponsor: Western University	
Total	\$1 100
