Division: Earth & Environmental Sciences

Category: Junior

Region: Pacific Northwest

City: Smithers, BC

School: Smithers Secondary School

Abstract: The purpose of my experiment was to determine if bone meal added to soil before transplanting plant seedlings, enhances and promotes growth. To determine this I created 3 different growing mediums and compared them for plant height, speed of initial flowering and total number of flowers produced.

Awards	Value
Honourable Mention - Earth & Environmental Science - Junior	\$100
Sponsor: Petro-Canada	
Total	\$100
