| Abstract:                                  | The purpose of my experiment was to determine if bone meal added to soil before transplanting plant seedlings, enhances and promotes growth. To determine this I created 3 different growing mediums and compared them for plant height, speed of initial flowering and total number of flowers produced. |

| Awards  | Value |
|---|-------|
| Honourable Mention - Earth & Environmental Science - Junior | \$100 |
| Sponsor: Petro-Canada                                       |       |
| Total   | \$100 |
