Flame On

Challenge: Innovation
Category: Junior
Region: River Valley
City: Big River, NB

School: Superior Middle School

Abstract: I wanted to see if fabric softener would make fabric more flammable. To do

this I constucted a device to burn stips of material on. I burnt treated and

un-treated stips of material.

Biography

I got the inspiration for my project while I was doing the laundry, I noticed that on my little brothers pyjamas, there was a tag that stated not to use fabric softener because it would make the fabric more flammable, and I wanted to put it to the test. For my further investigations, I plan to use fabric softener dryer sheets and also try different types of fabric softener and material. My advice for other students thinking about doing a project is to make sure you like your project and to have fun while doing your project. Also, never doubt yourself and always have confidence in you r project.
