Massive Energy

Challenge: Energy

Category: Junior

Region: Chatham-Kent

City: Tilbury, ON

School: Tilbury Area P.S.

Abstract: Massive Energy is an experiment used to harness the force of gravity. Gravity is a constant source of energy that has endless potential. We are taught that every object on Earth has weight due to the gravitational pull. The force of gravity could be the next alternate energy source of the future that will never deplete if we harness the weight from gravity.

Biography

My name is Seth Barnwell and I am a grade 8 student at Tilbury Area Public School. I enjoy playing many sports for school and community teams. I am currently share the role of the Prime Minister of the school council. My inspiration for this project comes from David Suzuki. His inspiration on me is to make a difference by the way I live and to try to change the world. I have not quite decided what my career will be but whatever I do I want to be a good one. I am very blessed to be able to express my ideas freely and to have tools to try to build upon the ideas. I feel everyone should experiment with their ideas and not be held back. To inspire others to try to make a difference using science I am going to end with one of my favorite quotes from author unknown. "If you think you are too small to make a difference, you have never gone to bed with a mosquito in the room."
