Kelly Yang

H2S turns flowering energy to growing new leaves

Challenge: Resources

Category: Junior

Region: Northwestern Ontario

City: Thunder Bay, ON

School: Bishop E.Q. Jennings

Abstract: H₂S is a gas that is healthy to our body at very small amounts. My experiment aims to test if H₂S could help plants by preventing flowering but growing new leaves. When green vegetables start to flower, their nutrition goes to the flowers, resulting in an end to leaf growth, but with H₂S, we can prevent this.

Biography

My name is Kelly Yang, and I am a grade 8 student at Bishop EQ Jennings School, Thunder Bay, Ontario. My favorite subjects are Science and Art. I play violin in the Thunder Bay Symphony Youth Orchestra. Some of my hobbies include painting, reading and soccer. I would like to attend an honorable medical school in Canada and become a medical doctor in the future. This is my first time to attend Canadian Wide Science Fair, and I wish I can make new friends and learn new things in Lethbridge AB.
