Abstract: Many cyclists today are killed or injured in vehicle related car crashes. There are many existing devices which would improve a cyclist's safety. I thought of many ideas to rectify this situation; one stood out the most. You never see a helmet with turn signals. I envisioned a simple yet compact way to attach turn signals to a bicycle helmet.

Biography

My name is Misko McGregor I am 14, and I am in 9th grade. I enjoy creating things, running, cycling, and drumming. I am a musician who enjoys a wide variety of music especially blues and electronic. Finally, I have an interest in computer science and electrical engineering. I plan on having a career in engineering or music.
