Shahbaz Momi

T3Board - Anti-tendinitis keyless keyboard

Challenge: Innovation

Category: Junior

Region: Niagara

City: Welland, ON

School: Glynn A. Green

Abstract: My project is about a new type of keyboard designed to reduce the medical risks created by a conventional keyboard. It is a keyless keyboard that is intended for reducing the risk of getting tendinitis and other musculoskeletal disorders. It uses both multitouch technology and 4-wire resistive touchscreen technology to create an entirely new interface for consumers to use.

Biography

My name is Shahbaz Momi and I am a grade eight student at Glynn A Green Public School. I have great interest in computers and technology and like making things that involve computers. I play basketball every other day in addition to making computer software. I would like to go to university studying something in the field of computers and technology. I know a couple different languages and would like to learn some more. I love to meet new people and make new friends. This is the my first time attending the CWSF.
