Cérès : le drone agricole

Challenge: Innovation

Category: Intermediate

Region: Montréal CLS

City: Montréal, QC

School: Collège Mont Saint-Louis

Abstract: We designed and built a drone for agricultural purpose. The small aircraft is fully autonomous and it can help farmers analyze his irrigation system, check the nitrogen content in the soil and detect insects infestation.

Biographies

Mathieu - I am a curious boy who has always been interested by technology. In our project, my partner and I learned a lot of things about the many subjects concerned in our project. We enjoyed working on it and we will for sure searching new informations to develop our conception. In the futur, i want to be an aeronautical engineer and my favorite hobby is skiing.
